Career Objective

3rd-year Information Technology student (Japanese-Oriented Program) seeking a **Full-stack / Backend Developer Internship**. Hands-on experience leading a full-stack team project (TaskNexus) and building an AI-integrated application (AlgoMinds) with NestJS, React, and the Gemini API. Comfortable working across the stack from database schema design to real-time features, and eager to apply this in a production engineering environment while continuing to grow in system design and AI-assisted development.

Education

Da Nang University of Technology (DUT)

2024 – Present

Information Technology (Japanese-Oriented Program)

- **GPA:** 3.37/4.0
- **Foreign Languages:** English (IELTS 6.0), Japanese (JLPT N4).
- Developed strong foundations in software engineering principles, full-stack web development, and database management.

Technical Skills

- **Languages & Frameworks:** JavaScript, TypeScript, Java, C#, React.js, Node.js, NestJS, Express.
- **Web Development:** RESTful APIs, Frontend & Backend Integration, Real-time Communication (Socket.io), AI API Integration (Gemini API).
- **Databases:** Prisma, PostgreSQL, SQL, NoSQL, Redis.
- **Development Tools:** Git, GitHub, Docker, Postman, Render, Vercel, Cisco Packet Tracer.

Notable Projects

TaskNexus ([GitHub Repository](#))

Project Leader

- Led a centralized platform that aggregates messages from Gmail, GitHub, and Slack into a unified inbox, letting users convert any incoming message directly into a trackable task with one click.
- Designed the backend architecture and database schema from scratch as Project Leader, coordinating the team's workflow and module ownership.
- *Tech Stack:* Node.js, Express 5, PostgreSQL 16, Prisma ORM 7, Zod, Docker & Docker Compose.
- *Key Features:* Applied Clean Architecture (Router → Controller → Service → Repository → DTO) across Auth and User modules; built centralized error handling with 5 custom exception classes (400/401/403/404/500); implemented secure authentication with bcrypt password hashing, salt generation, and Zod-based request validation.
- Maintained the project across 149+ commits with full architecture documentation for team onboarding.

AlgoMinds ([GitHub Repository](#))

Full-stack Developer

- Built a "Think-First" coding interview platform where users must justify their algorithmic strategy to an AI interviewer before the code editor unlocks, enforcing structured problem-solving over trial-and-error.
- *Tech Stack:* NestJS 11, PostgreSQL 16 (Prisma 7), Redis + BullMQ, Socket.io, React 19 + Vite, TanStack Query, Zustand, shadcn/ui, Tailwind v4, Monaco Editor, Google Gemini API.
- *Key Features:* Architected a modular monolith with real-time session events via Socket.io and async AI-evaluation jobs via BullMQ; integrated Monaco Editor for an in-browser coding experience; integrated Piston, a containerized sandbox, to safely execute and grade submitted code across multiple languages.
- Maintained code quality across 350+ commits with automated linting (Husky + lint-staged pre-commit hooks) and CI workflows via GitHub Actions.

Soft Skills

- **Team Leadership:** Led the TaskNexus team through architecture decisions, task delegation, and database schema design as Project Leader.
- **Fast Learner:** Independently picked up NestJS, Prisma driver adapters, and Gemini API integration within the Algo-Minds project timeline.
- **Problem-Solving:** Debugged and resolved CI/CD, environment configuration, and cross-service integration issues across two full-stack projects.

Certifications

- | | |
|--|--------------------|
| • Generative AI Chat App Development with Microsoft Foundry – Microsoft | <i>August 2026</i> |
| • Introduction to MCP Server – Microsoft | <i>August 2026</i> |
| • SQL (Basic) Certificate – HackerRank | <i>August 2026</i> |
